algosec

Secure application connectivity.
Anywhere.

Partner solution brief
AlgoSec and Cisco
Better together for network segmentation

Customer solution

Discovery and analysis
AlgoSec **works with CISCO's network infrastructure to discover** network communication and application flows.

Automate policy anywhere
AlgoSec helps organizations define and **enforce network segmentation policies across their CISCO datacenter, and beyond into cloud, firewalls, WAN and more**.

Risk assessment and compliance
AlgoSec **identifies the risks associated with network segmentation** and provides insights into potential vulnerabilities or misconfigurations.

Continuous enforcement
AlgoSec c**ontinuously monitors the network segmentation** policies in the Cisco environment, providing real-time assurance of segmentation.

Customer impact

Enhanced security
Automated policy management and risk assessment capabilities enable organizations to **establish robust network segmentation, reducing the risk of unauthorized access** and data breaches, enhancing security, and preserving brand reputation.

Compliance and regulatory adherence
Assess network segmentation against compliance standards ensuring that the **organization avoids penalties, legal liabilities, and reputational damage** associated with non-compliance.

Operational efficiency
Automated policy analysis and rule management, **organizations can significantly reduce manual effort and human errors** associated with segmentation projects.

CISCO Partner

Cisco and AlgoSec partnership — key points

- AlgoSec is a Solutions Plus Partner with Cisco

- AlgoSec products can be purchased directly from the Cisco GPL

- AlgoSec has developed integrations across many Cisco Products including Firewall technologies (ASA, Meraki, FirePower) Datacenter fabric (ACI or Nexus), Secure workload, and many others (SD-Access ISE, IOS).

Why AlgoSec?

Customers achieve successful network segmentation within ACI and network security devices with AlgoSec.
