LONG-TERM CONSULTATION WITH AN ALGOSEC RESIDENT ENGINEER

At AlgoSec, we pride ourselves on delivering unmatched expertise and support to keep your cyber security strategy always ahead of the curve. To meet the challenges of an ever-changing cyber security landscape, AlgoSec offers our customers a long-term consultation with an AlgoSec Resident Engineer.

The purpose of the long-term consultation with an AlgoSec Resident Engineer (ARE) is to offer a resource for all your security risk management needs, both in the cloud and on-premises. Your dedicated ARE will bring extensive expertise in AlgoSec and technical knowledge to ensure that the AlgoSec platform effectively fulfills your business objectives.

As a main point of contact, your ARE acts as your organization's in-house strategic, long-term advisor. This includes guidance on application connectivity and security management activities while taking an active part in monitoring and enhancing your AlgoSec architecture to best fit your organization's unique needs.

Your ARE will leverage AlgoSec's vast experience to deliver best practices for your use case quickly, streamlining operations and retaining legacy knowledge while liaising with AlgoSec engineering, product management, and technical services. In addition, your ARE can provide specific hands-on activities.

To achieve maximum return on investment while keeping costs at a minimum, our standard offer provides one ARE who works remotely for one day per week.

Additional capacity or on-site service can be provided as an option. To ensure preservation of legacy knowledge, working with the ARE is initiated from day one of your engagement.

Key Benefits

- Dedicated technical engineer
- In-house strategic, long-term consultant
- Business continuity
- Learn from worldwide leading organizations
