

ALGOSEC TECHNICAL AUDIT

Get a technical audit of your running AlgoSec environment – remotely or on-premises. Ensure that your system is optimally configured to get the best performance and functionality.

Receive insights, identify critical issues, and get actionable suggestions to help you improve your network.

Your network management operation changes on an ongoing basis. Over time, your AlgoSec solution may become operationally sub-optimal.

To ensure you always get the most from your AlgoSec solution and optimize performance and functionality, AlgoSec Professional Services offers an in-depth Technical System Audit.

WHAT'S INCLUDED?

During the technical audit, the AlgoSec Professional Services expert will investigate system performance, logs and other technical aspects to identify issues related to following components:

Appliance configuration

AlgoSec deployment

- Upgrade
- Clean installation
- Virtual machine

Performance Profiling

HA/DR clustering

Database performance

- table and indexes statistics
- block hits
- identify database bottlenecks

Optimize AlgoSec environment for best performance and functionality

- AlgoSec Firewall Analyzer
- AlgoSec FireFlow
- AppViz

At the end of the technical audit, you will receive a comprehensive report of your current system status, optimization suggestions, and architectural recommendations.

It is recommended to perform an AlgoSec Technical Audit once a year, and at least 6 months following initial deployment.

NOTE: The Technical System Audit service excludes PS activity, such as customization, upgrade and migration. Scope of activity will be discussed separately as needed.
